

Design Specification for TestHub

1. Overview of the Project

- **Project Title: TestHub**
- **Brief Description:**
 - The application will collect feedback from the user regarding the experiment they participated in.
 - The application will consist of a set of pre-created tests, and the user will need to participate in an experiment before taking a test.
 - Each user will be required to create a profile to take the test.
 - A profile can be used across multiple tests.
 - The application will feature graphical support for tests in the form of charts.
 - Tests and profiles can be added, edited, or deleted manually.

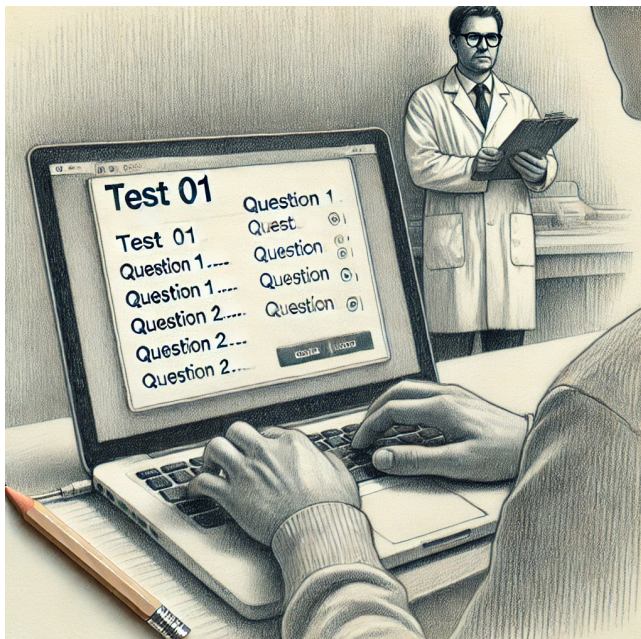

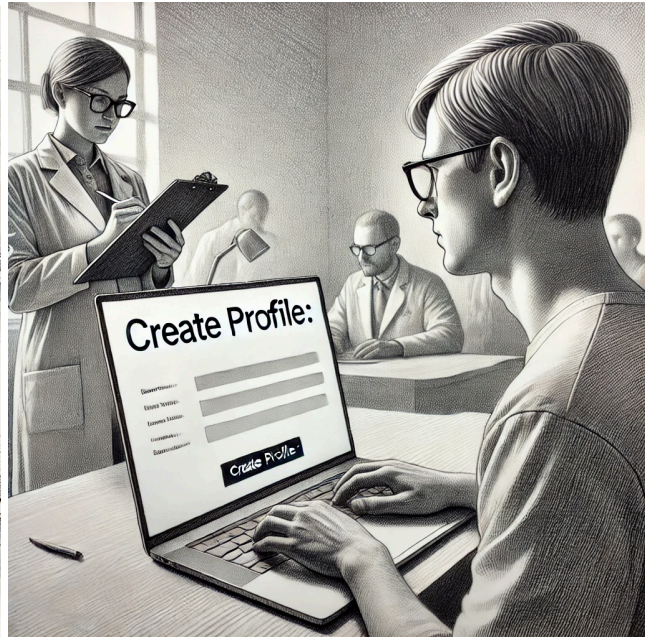

2. Target Domain and User Audience

- **Target Domain:** The application can be utilised in any context where it is necessary or important to gather user feedback. For example, this application can be used in my bachelor's thesis, where I will need to collect opinions from people about different image rendering methods.
- **Target Audience:**
 - **Demographics:** Teenagers, students, and middle-aged individuals.
 - **User Needs and Preferences:** The user must be able to read and interact with a computer at a basic level using a keyboard and mouse.

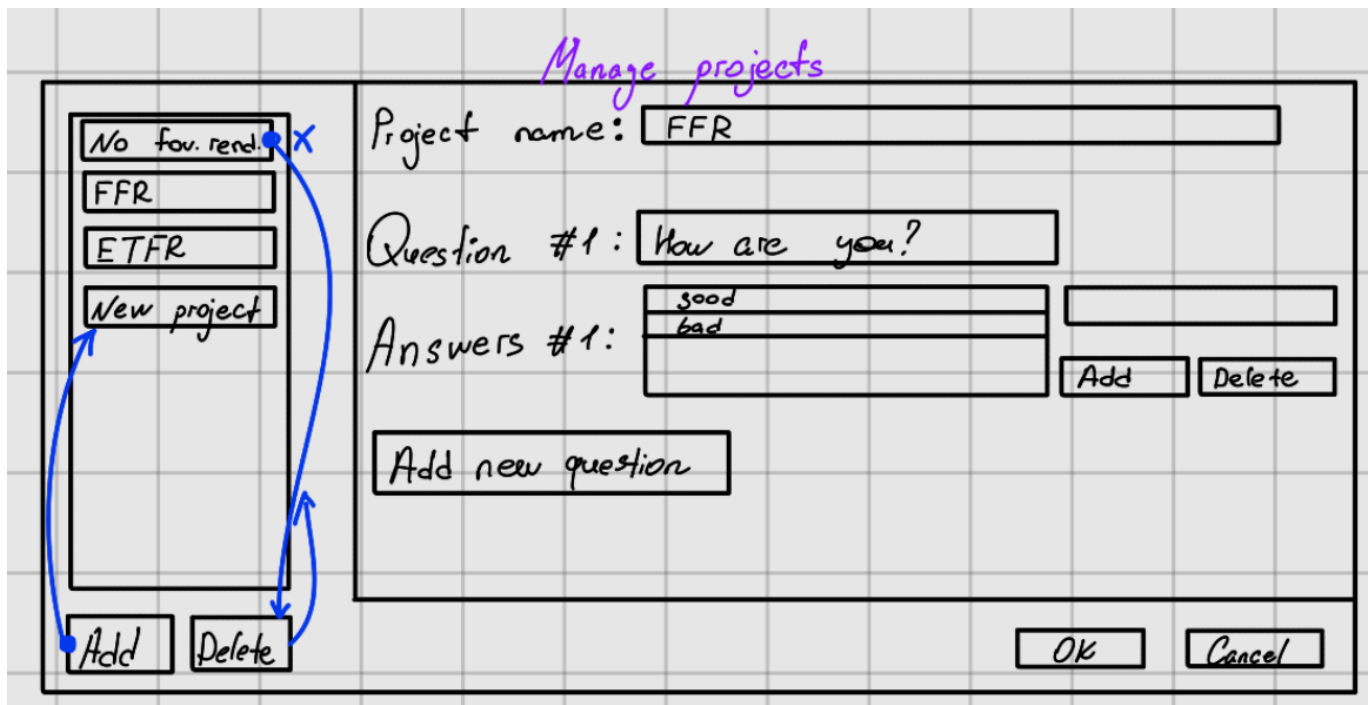

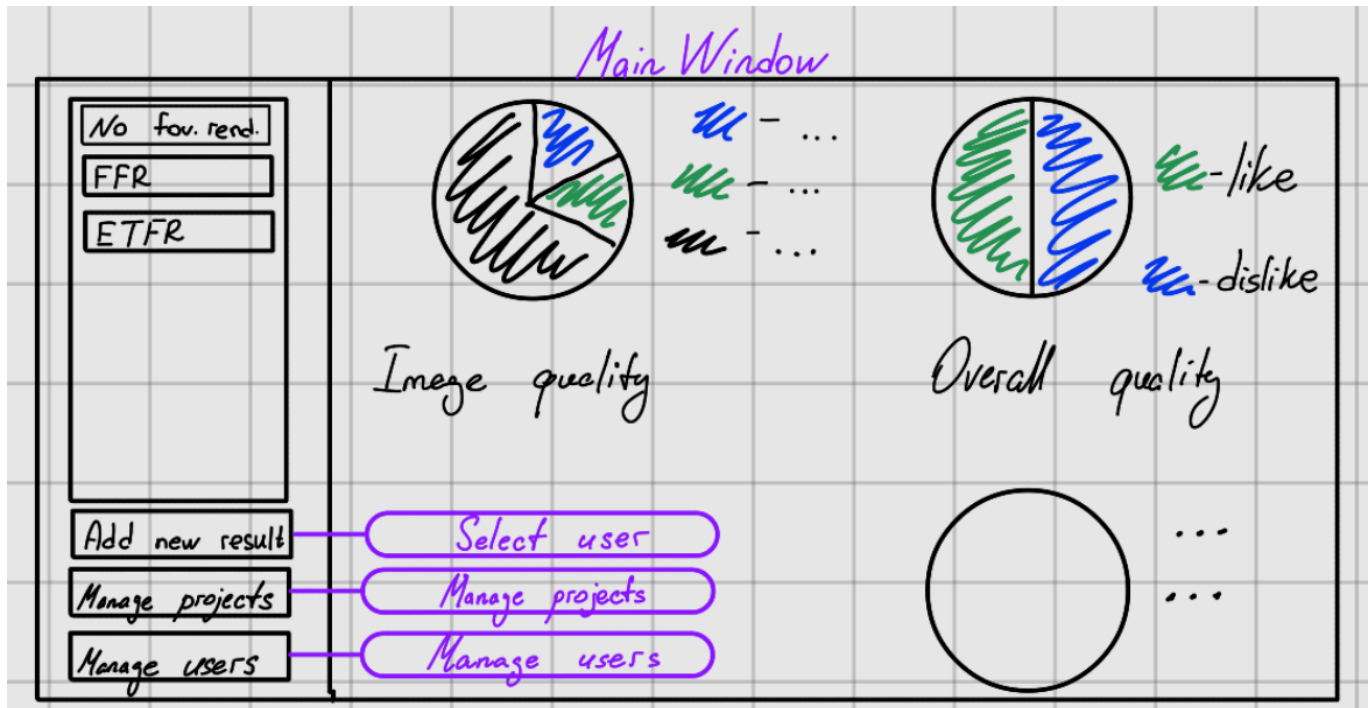

3. Use Case Scenario

- **Scenario:**
- The user participates in a pre-arranged experiment. Afterward, they are asked to take part in a survey or test related to the experiment. The user selects their profile in the application or creates a new one and starts the testing process. In the test, the user can answer questions either by selecting one of the provided options or by writing their own response.

4. Storyboard

5. UI Sketch

Manage users

User #1	Login: user #1
User #2	Name: ...
	Surname: ...

	OK Cancel

6. Functional and Non-Functional Requirements

- **Functional Requirements:**

1. The user must be able to create, edit, and delete a profile.
2. The application should support test-taking functionality, including selecting from provided options and entering free-text responses.
3. The application must provide graphical representation of test statistics in the form of charts.
4. It should allow administrators to manually add, edit, and delete tests.
5. The application should support multiple users, enabling a single profile to be reused across different tests.
6. It must include functionality for saving and exporting test results for further analysis.

- **Non-Functional Requirements:**

1. The interface must be responsive and adaptive to different screen sizes.
2. The interface should be intuitive, focusing on accessibility for users with basic computer skills.
3. Users should be able to use the application without the need for lengthy manuals or training.
4. The application's performance must ensure quick data loading and responsive interface interactions.
